

NON-UN VERSIONS

The pallets and the cages for our Non-UN versions are the same as for the UN versions. Therefore they are very strong and safe. A standard Non-UN version is equipped with a small label plate in the front. The bottles are being produced with up to three layers of HDPE.

UN VERSIONS

The 1.9 UN versions of the GCube® IBC are always equipped with four black corner protectors. The PE inner bottle weighs approximately 15.5 Kg. A standard UN version has a medium sized label plate in the front and a small label plate in the back.

LABEL PLATES

We have three different sizes of label plates available. Let's discuss the right combination for you!
