

Rahmenträger für Dachpfetten

The diagram illustrates a structural transition in a roof system. On the left, a horizontal beam labeled 'Rahmenträger für Dachpfetten' (Frame beam for roof rafters) is shown. This beam transitions into a pitched truss system labeled 'Fachwerkträger' (Truss beam). The truss system consists of a main longitudinal beam supported by a series of vertical posts and diagonal bracing members. The roof rafters are shown as a series of parallel beams extending from the truss system towards the right. The drawing uses a color-coded system: light orange for the main frame and truss beams, light purple for the roof rafters, and light grey for the diagonal bracing and smaller structural elements. The labels are written in red text.

Fachwerkträger
